

# THE FORUM FLOOR SYSTEM

PATENT PENDING

## *The Better Natural Turf Cover*

FORUM FLOOR is an easily installed, protective turf cover that is second to none in all aspects. For starters, a complete football field can be covered in less than 8 hours, while removal and storage takes only about 6 hours.

FORUM FLOOR works so well, it can be left on the ground for several days without damage to the grass. That's because only 20 percent of the floor area is actually in contact with the turf, allowing air and moisture to penetrate. In fact, after a few days, the grass will start to grow through the ventilation holes in the floor.

Last but not least, the UV resistant, plastic material makes FORUM FLOOR a very durable product that will last for many years.

For rock concerts, religious events or any other type of special mass gathering to be held on natural turf, FORUM FLOOR provides the perfect solution.

*Easy to transport...*

*Rolls out quickly...*

*Installation is fast and simple...*

*Can be used under stages...*

*Only 20% contact with turf...*

*Just bring on the crowds...*

*Clean up is fast...*

*Stores on rollers...*

*Efficient, space saving storage...*

Because FORUM FLOOR is handled in rolls, it is easy to transport anywhere. The rolls are 7 feet 4 inches wide and come in 60 to 100 feet long sections, depending on your need.

FORUM FLOOR's unique hinging system lets you join any number of sections to form a continuous floor from end to end. Since the floor features evenly spaced 1/4" ventilation holes, air and moisture circulate freely underneath, allowing turf to continue to breathe and grow.

FORUM FLOOR features an anti-slip surface for added safety and has qualified for North American fire retardancy ratings.

For today's stadium, FORUM FLOOR is the perfect answer to the many multi-purpose demands.
